TMSMultiLab Hackathon '26

<https://github.com/TMSMultiLab/TMSMultiLab/wiki/Hackathon2026>

Session 1: GitHub training / discussion

Outline:

1. TMSMultiLab on GitHub
2. The point of GitHub
3. Using GitHub repositories
 - a. Cloning*
 - b. Forking*
 - c. Developing*
 - d. Contributing*

TMSMultiLab on GitHub

1. **Community**
2. Schedule and record of **Meetings & other events**
3. **Wiki / guidance**
4. **Code repositories:**
 - a. *TMSMultiLab (general purpose)*
 - b. *TMS-RAT (reporting tools)*
 - c. *Others (TMS-SMART..., TMetaS...)*

The point of GitHub

- 1. Community resource**
- 2. Version control**
- 3. Development & deployment**
- 4. (feeding code-hungry AI monsters)*

The point of GitHub

The point of GitHub

Using GitHub. Level 1: Cloning

The diagram illustrates the process of cloning a GitHub repository. At the top left, there are three overlapping blue rectangular boxes representing a repository. The front-most box contains the text 'TMSMultiLab/TMSMultiLab v1.0'. A thick red arrow points vertically downwards from the bottom of these boxes to a light beige rectangular box at the bottom left. To the right of the arrow, the word 'Clone' is written in a large, bold, red, italicized font. Below 'Clone', the words 'to your local machine' are written in a smaller, black, sans-serif font. To the right of the beige box, the text 'Use the code. Enjoy!' is written in a bold, italicized, black, sans-serif font.

TMSMultiLab/
TMSMultiLab
v1.0

Clone

to your
local
machine

User1

Use the code. Enjoy!

Using GitHub. Level 2: Forking

Using GitHub. Level 3: Developing

Using GitHub. Level 4: Contributing

Task 1: Edit the wiki

1. Log in to GitHub
2. Edit the wiki (markdown + html)
 - a. Create a page (“test_[yourname]”)
 - b. Text, line spacing
 - c. Headers, bullets, lists
 - d. Tables
 - e. URLs
 - f. Images

Task 2: Create an Issue

1. Log in to GitHub
2. <https://github.com/TMSMultiLab/TMSMultiLab/issues>
3. Click New Issue
 - a. Title
 - b. Description
 - c. Assign members
 - d. Label (bug, documentation, enhancement,...)

Task 3: Clone the repository

1. On your local computer:
 - a. Navigate to where you want the repository
 - b. `git clone https://github.com/TMSMultiLab/TMSMultiLab`
 - c. ...wait...
 - d. [Nick makes change to [Contributor list](#) here]
 - e. Update with: `git pull`

Task 4: Fork the repository

1. Back on GitHub:
 - a. <https://github.com/TMSMultiLab/TMSMultiLab>
 - b. Click on the Fork button
 - c. Select your username
 - d. Click : Create fork

Task 5: Clone your *forked* repository

1. On your machine:
 - a. (Delete the repository you just cloned)
 - b. `git clone https://github.com/ [USERNAME] /TMSMultiLab`
 - c. ...wait...
 - d. *On GitHub, make a change to your [Contributor list](#)*
 - e. Update local machine with: `git pull`

Task 6: Develop your local repository

1. On your machine:
 - a. Check for updates: `git status [... git pull]`
 - b. *Make a change to your [Contributor list](#)*
 - c. Stage your new file with: `git add -a`
 - d. Commit your new file with: `git commit -m '[message]'`
 - e. Push to your GitHub repository: `git push`

Task 7: Contribute!

1. On GitHub ([https://github.com/\[USERNAME\]/TMSMultiLab](https://github.com/[USERNAME]/TMSMultiLab))
 - a. Check for updates: `Sync fork`
 - b. When Synched, `Contribute`
 - c. **Don't do this now!** (from here it might get messy...)

GitHub training

GitHub Golden Rules!

1. `Sync / pull` before you do anything each day
2. `Sync / pull` often during the day!
3. On the wiki: make small changes, `Preview`, then **Save page**
4. On your local repository: `pull` and `push` to keep up to date
